

Post 60k TR3A through TR3B

Category: Underhood

Example Shown: TCF TR3B

Component(s): Details of Right Front Engine

Discussion:

At J8: Radiator cap, four-pound AC brand. Seven-pound caps are not recommended.

At H5: Grease fitting on water pump.

At G7: At close examination, the black fold down tab holding the generator mounting bracket bolt securely to the engine block necessitated by excessive vibration.

At B5: The TR4 head as supplied to the TCF series of TR3Bs. Shown is the boss raised on the left side and the stamped head number.. This raised left side is absent on all other TR3As and TR3Bs.

At J4: The Fuel and Vacuum Advance lines exiting under the thermostat housing on their way to the carburetors. The Vacuum Line terminates at the bottom of the front carburetor.
